

Grid Cell Description

For the purposes of applying for potential wind and solar power sites located on Crown land in Ontario, the province has been divided into grid areas known as “grid cells”. A grid cell is bounded by lines of geographic latitudes and longitudes based on the NAD 83 (CSR98) datum. The area of a grid cell varies depending on its latitude and longitude, but generally will be within 45 to 65 hectares. Each grid cell also has a unique 12-digit reference number. The tables in this document list in numeric order the reference numbers of the 1,185 grid cells currently occupied by existing Crown land applications with Site Access (e.g. Applicant of Record status). These grid cells are therefore *not available* for the purposes of applying under the Feed-In Tariff (FIT) 2.1 Program for a proposed Crown land wind or solar power project.

The geographic locations and reference numbers of all grid cells in Ontario can be obtained from the grid cell spatial data layer, currently available on the Ontario Renewable Energy Atlas (http://www.lio.ontario.ca/imf-ows/imf.jsp?site=renew_en). Geographic Information Systems (GIS) software users may also download the grid cells geospatial data class (named “Wind Power Allocation Block”) from Land Information Ontario (<http://www.mnr.gov.on.ca/en/Business/LIO/index.html>).
